OSC Wenning reports that firefighting efforts continue today, intermittent rain has assisted with those efforts. The fire is reported to be more than 90% contained. EPA continues to perform air monitoring at the fire scene and in the surrounding community as the weather allows. Particulate monitoring was suspended early this morning due to heavy rain but continuous air monitoring with AreaRAEs and spot location monitoring with hand held instruments has continued. EPA's ASPECT plane conducted one additional overflight this morning and then demobilized from the site. The thermal imagery was been shared with Unified Command and has been helpful with identifying the remaining hot spots in the building debris.

Schools are scheduled to reopen on Monday. EPA will collect additional particulate air monitoring data at two schools near the fires scene on Monday as well. EPA will continue air monitoring throughout the weekend as the weather permits.
